- ▶ digital sovereignty for enterprises, citizens and public administration

what we believe in

Successful business models and accessibility of public services both require intense usage of digital techniques. Digitalization will remain primary driver of innovation.

Open and transparent platform based eco-systems support innovation and growth!

Information and knowledge society shapes new, digital business models. Their Target is perfect fit to customer needs, their fuel is data.

Collecting and processing of data defines future competition!

Dependency to american and chinese techcompanies has gained intensity. The success of digital platforms will reduce sovereignty.

Our „European way of life“ is under pressure!

what is needed

„digital sovereignty“ and „attractiveness for bright brains“!

Risc of dependency on international players is rising, global competition for experts has started!

Public administration has an important role in distributing open source software.

Austria's government should act as role model for Europe!

Information- and knowledge society needs new ways of cooperation and new ways to handle information.

Europe needs a model based on European values and rules!

principles for an European way

- ▶ sovereignty in a digitized economy and society

Openness

propagate open source,
open data, open standards
and open innovation

Empowerment

leverage Austria's digital
competence

Collaboration

stimulate cooperation between
private and public sector in the
area of innovation and digitization

Trustworthiness

enable trust in quality and
authenticity of data, trust in
technology and trust in organisations

our activities

Open Source

open and transparent algorithms

Open Data

open access for reuse

Open Standards

open and transparent definition process

Digital Sovereignty

storing and processing of data under control of the data owner

Trusted Information

trusted information for better decisions instead of info-bubbles, fake-news and manipulation

Collaborative Projects

between organisations from different branches, between companies and science, between public and private sector

- ▶ Wir sind eine Community von verantwortlichen, hochrangigen IT - Managern Österreichischer Unternehmen aller Branchen und öffentlichen Verwaltungen

- ▶ Collaboration ist unsere DNA
